

TTL Clock

This is the same top level design as the Transistor Clock, but implemented in 1970's era TTL logic.

All parts, solder and assembly manual come in the box. This kit shows the progress of technology when compared to the Transistor Clock.

MicroProcessor Clock

This is the same top level design as the Transistor Clock, but implemented with the more recent technology of a single chip microprocessor and software.

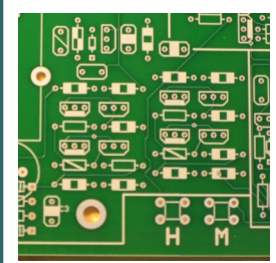

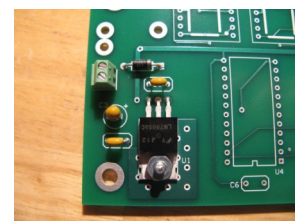

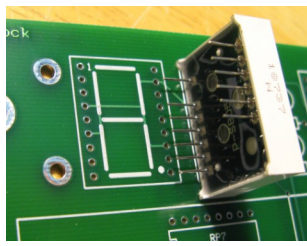

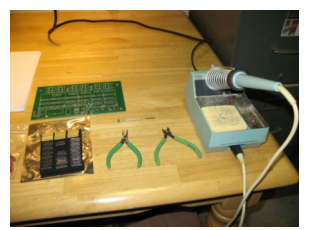

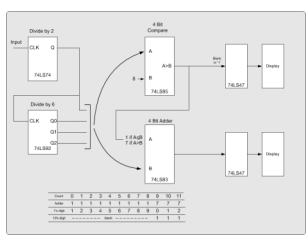

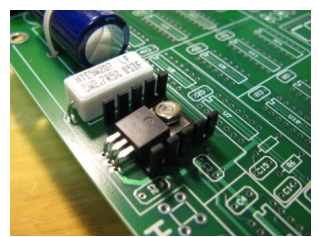

The kit includes all parts, programmed processor, solder and assembly manual. This kit shows the progress of technology when compared to the Transistor Clock.

Transistor Clock

A Wall Clock Kit built only of Transistors, Resistors, Diodes and Capacitors - No Integrated Circuits!

Kit includes all parts; 194 Transistors, 566 Diodes, 400 Resistors, 87 Capacitors, Displays, PC Board, Solder, and assembly manual. Over 2700 solder joints

The assembly manual teaches how the clock works at both the logic level and transistor level. The part values are guided by symbols on the PC board

You will learn a thing or two while assembling this kit and the result is a work of art

Resistor Markings	Value	Color Code
[Grey box]	10K	Orange-Black
[Grey box]	100K	Orange-Black
[Grey box]	1K	Red-Black
[Grey box]	1M	Red-Black
[Grey box]	330	Orange-Orange

Designed and assembled in the Pacific Northwest

Kits include all electronic parts, PC board, assembly manual, solder and solder wick and wall transformer.

Plaques and cases available separately.

Prices:

Transistor Clock Kit—\$199.95

Plaque— \$20

TTL Clock Kit—\$149

Plaque— \$10

Microprocessor Clock Kit—\$99

Calendar Kit (Red)— \$282

Calendar Kit (Green)— \$333

Case and Plexiglas— add \$28
